1 Introduction

1.1 Objective

User Acceptance Test is to be performed by key users on The Republic of Guinea – GCPIS before the system is deployed at pilot sites. The objectives of the testing are:

- To ascertain that the system conforms to the Functional Specification.
- To validate that the user and organizational requirements and expectations have been fulfilled.

This testing will be done at simulation environment using test data.

1.2 Scope

The test cases in this document will provide test scenarios which shall cover the scope of the following process:

- Central MOFA notification API

This system/module would be tested as an integrated whole following a series of scripted scenarios which cover the full process of the various use cases.

1.3 References

The following documents are referenced in this document:

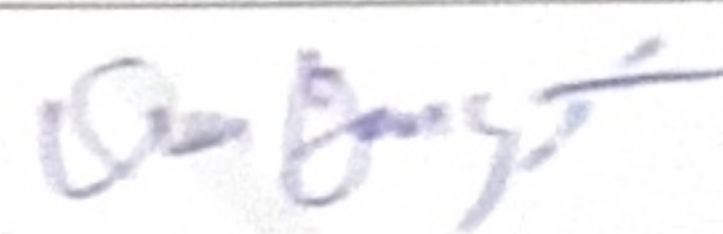

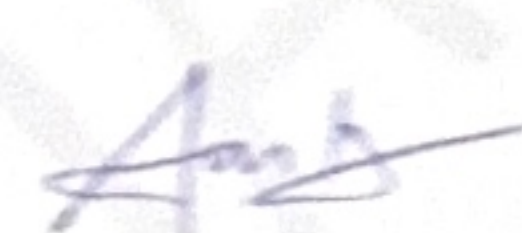

- **GINEPP-PCR-025v002_API_3rdParty_Notification_20251205:** This document describes the integration of a new API for the Third-Party Notification System residing in MOFA. The objective is to enable the MOFA Application to retrieve and check the details and status of passport application that manage for Foreign Mission through a secure API authentication and structured data queries.

1.4 Test Environment

The test environment and test materials used for the User Acceptance Test are listed as below:

No	Hardware/OS	Software Release	Version
1.	Postman API application		11.72.9
2.	<u>Central Server</u> OS : Windows Server 2012 R2 Database : Microsoft SQL Server Management Studio .Net : MS .Net Framework 4.00 Framework DB Schema : GCPISCentral_MSSQL v1.2.7.4	<u>Web Service(s)</u> Central MOFA Notification API	1.0.3.0

2 Test Participants

Test Objective	To perform test on updates below module: • Central MOFA Notification API			
Test Date	From:	To:	Location	GUINEA MOFA
	01/01/2026	14/04/2026		
Tester Name / Organization	Ousmane Dambouya		Signature	
Tester Name / Organization	Amar Diallo		Signature	
Tester Name / Organization			Signature	
Tester Name / Organization			Signature	
Witness Name / Organization			Signature	

	User Acceptance Test		
	The Republic of Guinea - GCPIS		
	Document Ref No	Version	Release Date
	UAT/PIS/PCR025/0100	01.00	11 DEC 2025

Test Procedures				
Case/Steps	Test Description	Expected Result	Actual Result	Pass/Fail
	<pre>{ "username": "MOFA", "password": "M0fa2025!" }</pre> Click the Send button to execute the request.	(managed on the back end).		
TG02	Login with invalid User Credential <u>Pre-condition:</u> - Central MOFA Notification API and Postman environment are executed and running. - A valid user account configured in Central MOFA Notification web config (username/password). - Continue from TG01 (Login with Valid User Credential)			
1.	- At the Body tab, select Raw and choose JSON format. - Enter invalid username & password. e.g.: <pre>{ "Username": "MOFA_INVALID", "password": "M0fa2025!_123" }</pre> - Click the Send button to execute the request.	- Response status is error, invalid credentials. - No token return.	☒

4 Test Script – Notification Retrieval API

General Information	
System Name / Subsystem	Central MOFA Notification API
Test Cycle Number	1
Brief Description	This testing focuses on retrieving application notification data based on search filters. The request must include the token in the API header and JSON request parameters
Pre-requisition	There are available records in Central DB.
Assumption	The test participants are familiar with the Postman or other API platform.

4.1 Notification Retrieval API – Valid Values

Test Procedures		Expected Result	Actual Result	Pass/ Fail
Case/ Steps	Test Description			
VV01	Retrieve Central Records by Valid Values <u>Pre-condition:</u> - Central MOFA Notification API and Postman environment are executed and running. - A valid user account configured in Central MOFA Notification web config (username/password). - Valid token is available - Maximum Date range is configured in Central MOFA Notification web config.			
1.	- Click New, then click HTTP Request. - In the request URL field, enter the endpoint. e.g.: <code>https://{base_url}/api/cig/ListNotifyApplicati on</code> - In the dropdown, select POST method	- The request tab is created successfully. - The URL and POST method are displayed correctly.	☒	Pass
2.	Click Headers tab and input the following:	The header is created	☒

	The Republic of Guinea - GCPIS			
	Document Ref No	Version	Release Date	
	UAT/PIS/PCR025/0100	01.00	11 DEC 2025	

Test Procedures				
Case/ Steps	Test Description	Expected Result	Actual Result	Pass/ Fail
	Key: Authorization Value: Bearer {{token}} Note: Token is retrieved from the TG01 - Login with Valid User Credential	successfully		pass
	Search by Ticket Number - Go to the Body tab, select Raw and choose JSON format. - Enter any valid Ticket Number inside the parameters. e.g.: <pre>{ "TicketNumber": "F20250603000", "StartSubmissionDate": "", "EndSubmissionDate": "", "ApplicationStatus": "" }</pre> - Click the Send button to execute the request. Note: TicketNumber (Referring to Payment Reference No.)	- Status 200 OK. - Postman API returned correct records	☒	pass
	Search by Submission Date (Date Range > 3 months) Enter any valid Submission Date where Date Range is more than three months inside the parameters. e.g.: <pre>{ "TicketNumber": "", </pre>	- Status 400 Bad Request. - Postman API return status error with proper message.	☒

	The Republic of Guinea - GCPIS		
	Document Ref No	Version	Release Date
	UAT/PIS/PCR025/0100	01.00	11 DEC 2025

Test Procedures			
Case/Steps	Test Description	Expected Result	Actual Result Pass/ Fail
	"StartSubmissionDate": "2025-06-01", "EndSubmissionDate": "2025-12-01", "ApplicationStatus": "" } - Click the Send button to execute the request. Note: - Format: yyyy-mm-dd, i.e. 2017-09-15 - Date range is set in 3 months and configurable at web config. - Date range with more than 3 months will return error message. - Must provide both StartSubmissionDate and EndSubmissionDate		Pass
5.	Search by Submission Date (Date Range < 3 months) - Enter any valid Submission Date where Date Range is less than three months inside the parameters. e.g.: <pre>{ "TicketNumber": "", "StartSubmissionDate": "2025-10-01", "EndSubmissionDate": "2025-12-01", "ApplicationStatus": "" }</pre> - Click the Send button to execute the request.	- Status 200 OK. - Postman API returned correct records	Pass ✓

	The Republic of Guinea - GCPIS		
	Document Ref No	Version	Release Date
	UAT/PIS/PCR025/0100	01.00	11 DEC 2025

Test Procedures				
Case/ Steps	Test Description	Expected Result	Actual Result	Pass/ Fail
Search by Application Status and Submission Date				
6.	- Enter any valid Application Status and submission date inside the parameters. e.g.: { "TicketNumber": "", "StartSubmissionDate": "2025-10-01", "EndSubmissionDate": "2025-12-01", "ApplicationStatus": "Production Completed" } - Click the Send button to execute the request. Note: - Valid Application Status - Pending Final Approval - Final Approval Passed - Final Approval Rejected - Production Completed - Search by Application Status must combine with Submission Date. - Search by Application Status only is not allowed.	- Status 200 OK. - Postman API returned correct records	☒	pass
Search by combination of any Parameters				
7.	Enter any valid combinations inside the parameters. e.g.: { "TicketNumber": "F20250603000", "StartSubmissionDate": "2025-10-01", "EndSubmissionDate": "2025-12-01", }	- Status 200 OK. - Postman API returned correct records	☐

Test Procedures			
Case/Steps	Test Description	Expected Result	Actual Result
	"ApplicationStatus": "" } Click the Send button to execute the request.		Pass/Fail

4.2 Notification Retrieval API – Invalid Values

Test Procedures			
Case/Steps	Test Description	Expected Result	Actual Result
INV01	Retrieve Central Records by invalid Values <u>Pre-condition:</u> - Central MOFA Notification API and Postman environment are executed and running. - A valid user account configured in Central MOFA Notification web config (username/password). - Valid token is available - Maximum Date range is configured in Central MOFA Notification web config.		
1.	- Click New, then click HTTP Request. - In the request URL field, enter the endpoint. e.g.: <code>https://{{base_url}}/api/cig/ListNotifyApplicat</code> <code>ion</code> - In the dropdown, select POST method. - Click Headers tab and input the following: Key: Authorization Value: Bearer {{token}} Note: Token is retrieved from the TG01 - Login	- The request tab is created successfully. - The URL and POST method are displayed correctly. - The header is created successfully.	Pass
2.			Pass

5 Test Result Summary

5.1 Token Generation API

Test No	Test Description	Total Test Case	Result		Remark (Defect/ Observation/ Action)
			No of Case Pass	No of Case Fail	
TG01	Login with Valid User Credential	1	15	0	Works well
TG02	Login with Invalid User Credential	1	0	15	- 11 -

5.2 Notification Retrieval API – Valid Values

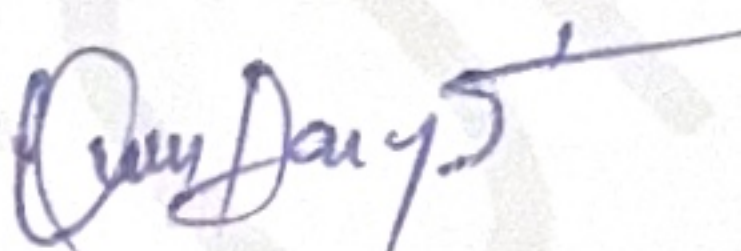

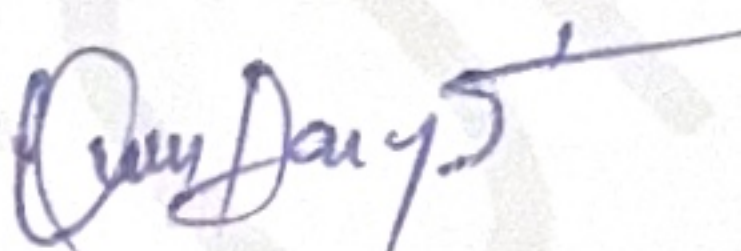

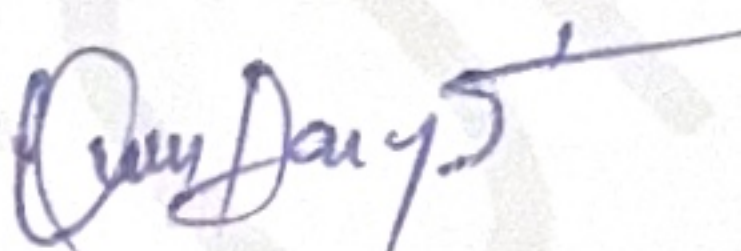

Test No	Test Description	Total Test Case	Result		Remark (Defect/ Observation/ Action)
			No of Case Pass	No of Case Fail	
VV01	Retrieve Central Records by Valid Values	1	10	0	- 11 -

5.3 Notification Retrieval API – Invalid Values

Test No	Test Description	Total Test Case	Result		Remark (Defect/ Observation/ Action)
			No of Case Pass	No of Case Fail	
IV01	Retrieve Central Records by invalid Values	1	0	7	- 11 -
IV02	Retrieve Data Without Token	1	0	8	- 11 -
IV03	Retrieve Data with Invalid Token	1	0	5	- 11 -
IV04	Retrieve Data with Expired Token	1	0	1	- 11 -

	User Acceptance Test		
	The Republic of Guinea - GCPIS		
	Document Ref No	Version	Release Date
	UAT/PIS/PCR025/0100	01.00	11 DEC 2025

6 Conclusion
